

# Macadamia Nut

Scientific Name: *Macadamia Integrifolia*

Origin: Native to Australia

© Bugjuice

It is a medium to large sized tree. Fruits are generally green skinned, with a brown seed, inside of its hard shell is an edible white kernel. Seed kernels are edible when roasted. Trees grow best in full sun, except in hot climates where part shade is beneficial. Trees like year-round water, and although they will stand periods of drought, fruit set is usually lower.
