It is a shrub or sometimes a small tree in the soapberry family. An excellent plant for dry, windy, full sun areas where few other plants will survive. Prune after fruiting to shape or keep short. 'A'ali'i can be shaped into a small tree, topiary, or hedge. They prefer full sun, branching and flowering more profusely with good sunlight. It is found on all the main islands except Kaho'olawe in almost every habitat ranging from almost sea level to 7,500 feet.
